• Identificar la posición de los taladros ciegos sobre los calentadores y si son de \varnothing 7 mm o 9 mm (ejemplo: taladro encima del calentador n° 1 y n° 3 de \varnothing 9 mm= 908068/908168). Por diferencias de mecanizado, las culatas no son intercambiables.

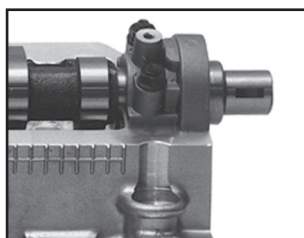

• Study the drill holes positioned above glow plugs, \varnothing 7 mm or 9 mm (example: drill hole above glow plug n° 1 and n° 3 \varnothing 9 mm = 908068/908168). None of the heads listed below are interchangeable.

• Identifier la position des trous bouchés sur les bougies. Ces trous sont de 7 mm ou 9 mm.

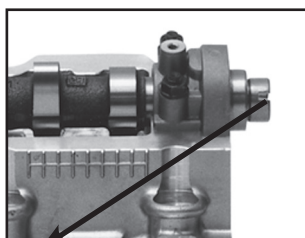

• Zur Identifizierung: beachten Sie die 7 oder 9 mm Bohrungen oberhalb der Glühkerzen. Im Beispiel oben finden sie zwei 9 mm Bohrungen oberhalb der 1. und 3. Glühkerzenbohrung. Keine dieser Zylinderköpfe können aufgewechselt werden.

• Identificar la posición de los taladros ciegos sobre los calentadores y si son de \varnothing 7 mm o 9 mm (ejemplo: taladro encima del calentador n° 1 y n° 3 de \varnothing 9 mm= 908068/908168). Por diferencias de mecanizado, las culatas no son intercambiables.

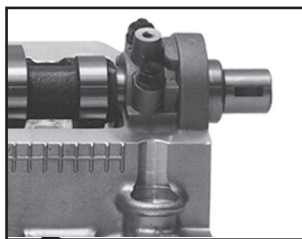

• Study the drill holes positioned above glow plugs, \varnothing 7 mm or 9 mm (example: drill hole above glow plug n° 1 and n° 3 \varnothing 9 mm = 908068/908168). None of the heads listed below are interchangeable.

• Identifier la position des trous bouchés sur les bougies. Ces trous sont de 7 mm ou 9 mm.

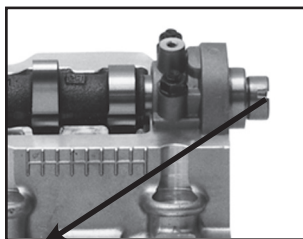

• Zur Identifizierung: beachten Sie die 7 oder 9 mm Bohrungen oberhalb der Glühkerzen. Im Beispiel oben finden sie zwei 9 mm Bohrungen oberhalb der 1. und 3. Glühkerzenbohrung. Keine dieser Zylinderköpfe können aufgewechselt werden.

Importante .- Cuando el árbol no lleva pin de engrase del depresor, el engrase del depresor se realiza a través del orificio de Ø 6 ubicado en el lateral de la culata.

Attention.- If the camshaft has no drilled end pin allowing lubrication of vacuum pump, lubrication is made via a 6 mm Ø hole located on the side of the cylinder head.

Attention ! Si l'arbre à came n'a pas de pivot de lubrification de la pompe a vide, la lubrification de la pompe se fait à travers un trou de Ø 6 situé sur le côté de la culasse.

Wichtiger Hinweis! Wenn die Nockenwellen keine Stift für die Schmierung der Vakuumpumpe hat, muss über eine Ø 6 mm Bohrung an der Lateralseite des Zylinderkopfes geschmiert werden.
